

## Unidad 1.

## Actividad 4. Crea un entorno virtual para desarrollo en el lado del servidor

## 1. Descargar e instalar Vagrant.

- Descargamos la versión correspondiente a nuestro SO e instalamos.

## 2. Comprobar que la instalación se realizó correctamente lanzando el comando que muestra la versión instalada.

```
→ Ejercicio 4 DWES ls
❖ vagrant
→ Ejercicio 4 DWES ./vagrant -v
Vagrant 2.3.7
```

## 3. Añadir el proyecto Laravel Homestead seleccionando Virtualbox

```
→ Ejercicio 4 DWES ./vagrant box add laravel/homestead
==> box: Loading metadata for box 'laravel/homestead'
    box: URL: https://vagrantcloud.com/laravel/homestead
This box can work with multiple providers! The providers that it
can work with are listed below. Please review the list and choose
the provider you will be working with.

1) libvirt
2) parallels
3) virtualbox

Enter your choice: 3
==> box: Adding box 'laravel/homestead' (v13.0.0) for provider: virtualbox
    box: Downloading: https://vagrantcloud.com/laravel/boxes/homestead/versions/13.0.0/providers/virtualbox.box
    box: Calculating and comparing box checksum...
==> box: Successfully added box 'laravel/homestead' (v13.0.0) for 'virtualbox'!
```

## 4. Clonar proyecto Laravel Homestead en el directorio de trabajo e iniciar homestead.

```

→ workdir pwd
/home/alx/Downloads/Ejercicio 4 DWES/workdir
→ workdir git clone https://github.com/laravel/homestead
Cloning into 'homestead'...
remote: Enumerating objects: 6330, done.
remote: Counting objects: 100% (107/107), done.
remote: Compressing objects: 100% (47/47), done.
remote: Total 6330 (delta 68), reused 91 (delta 60), pack-reused 6223
Receiving objects: 100% (6330/6330), 1.55 MiB | 5.12 MiB/s, done.
Resolving deltas: 100% (3987/3987), done.
→ workdir cd homestead
→ homestead git:(main) ls
.  art  CHANGELOG.md  composer.lock  init.bat  LICENSE.txt  readme.md  scripts  tests
bin  composer.json  Homestead.yaml.example  init.sh  phpunit.xml.dist  resources  src  Vagrantfile
→ homestead git:(main) ./init.sh

```

## 5. Fichero configuración Homestead.yml.

```

GNU nano 7.2 Homestead.yaml
---
ip: "192.168.56.56"
memory: 2048
cpus: 2
provider: virtualbox

authorize: ~/.ssh/alxcorp.pub

keys:
  - ~/.ssh/alxcorp

folders:
  - map: ~/code
    to: /home/vagrant/code

sites:
  - map: homestead.test
    to: /home/vagrant/code/public

databases:
  - homestead

features:
  - mysql: true
  - mariadb: false
  - postgresql: false
  - ohmyzsh: true
  - webdriver: false

services:
  - enabled:
    - "mysql"
  # - disabled:
  #   - "postgresql@11-main"

#ports:

```

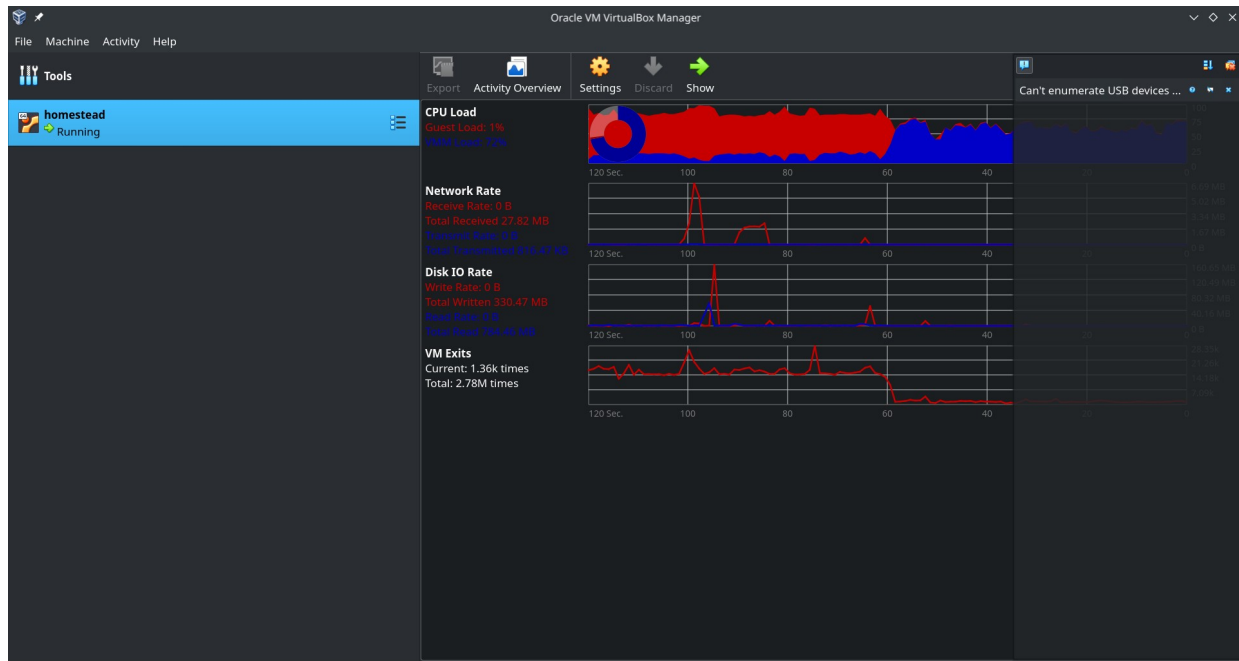

## 7. Lanzamos la máquina.

```

→ homestead git:(main) ../../vagrant up
Bringing machine 'homestead' up with 'virtualbox' provider...
==> Homestead: Importing base box 'laravel/homestead'...
==> Homestead: Matching MAC address for NAT networking...
==> Homestead: Checking if box 'laravel/homestead' version '13.0.0' is up to date...
==> Homestead: Setting the name of the VM: homestead
==> Homestead: Clearing any previously set network interfaces...
==> Homestead: Preparing network interfaces based on configuration...
Homestead: Adapter 1: nat
Homestead: Adapter 2: hostonly
Homestead: Forwarding ports...
Homestead: 80 (guest) => 8080 (host) (adapter 1)
Homestead: 443 (guest) => 44300 (host) (adapter 1)
Homestead: 22 (guest) => 2222 (host) (adapter 1)

```

9. Subimos un fichero para mostrar un Hola Mundo.

# Hola, Alejandro Priego

## 10. Errores encontrados y como solucionarlos.

```
==> homestead: Setting the name of the VM: homestead
Vagrant is currently configured to create VirtualBox synced folders with
the 'SharedFoldersEnableSymlinksCreate' option enabled. If the Vagrant
guest is not trusted, you may want to disable this option. For more
information on this option, please refer to the VirtualBox manual:

https://www.virtualbox.org/manual/ch04.html#sharedfolders

This option can be disabled globally with an environment variable:

VAGRANT_DISABLE_VBOXSYMLINKCREATE=1

or on a per folder basis within the Vagrantfile:

config.vm.synced_folder '/host/path', '/guest/path', SharedFoldersEnableSymlinksCreate: false
==> homestead: Clearing any previously set network interfaces...
==> homestead: Preparing network interfaces based on configuration...
homestead: Adapter 1: nat
homestead: Adapter 2: hostonly
==> homestead: Forwarding ports...
homestead: 80 (guest) => 8000 (host) (adapter 1)
homestead: 443 (guest) => 44300 (host) (adapter 1)
homestead: 22 (guest) => 2222 (host) (adapter 1)
==> homestead: Running 'pre-boot' VM customizations...
==> homestead: Booting VM...
==> homestead: Waiting for machine to boot. This may take a few minutes...
The guest machine entered an invalid state while waiting for it
to boot. Valid states are 'starting, running'. The machine is in the
'storage' state. Please verify everything is configured
properly and try again.

If the provider you're using has a GUI that comes with it,
it is often helpful to open that and watch the machine, since the
GUI often has more helpful error messages than Vagrant can retrieve.
For example, if you're using VirtualBox, run 'vagrant up' while the
VirtualBox GUI is open.

The primary issue for this error is that the provider you're using
is not properly configured. This is very rarely a Vagrant issue.
homestead git:(main) █
```

En nuestro caso, este error ocurre al ejecutar Virtualbox con un usuario diferente al que usamos para ejecutar Vagrant. La solución es reiniciar el equipo (al estar la VM bloqueada), ejecutar Virtualbox y borrar la máquina manualmente. Luego podremos volver a crearla.
