1. De tu última práctica, entra en la carpeta de tu tema y localiza los siguientes archivos:
Header.php

```php
function get_header( $name = null, $args = array() ) {
        /**
         * Fires before the header template file is loaded.
         *
         * @since 2.1.0
         * @since 2.8.0 The `$name` parameter was added.
         * @since 5.5.0 The `$args` parameter was added.
         *
         * @param string|null $name Name of the specific header file to use. Null
for the default header.
         * @param array       $args Additional arguments passed to the header
template.
         */
        do_action( 'get_header', $name, $args );

        $templates = array();
        $name      = (string) $name;
        if ( '' !== $name ) {
                $templates[] = "header-{$name}.php";
        }

        $templates[] = 'header.php';

        if ( ! locate_template( $templates, true, true, $args ) ) {
                return false;
        }
}
```

Footer.php

```php
function get_footer( $name = null, $args = array() ) {
        /**
         * Fires before the footer template file is loaded.
         *
         * @since 2.1.0
         * @since 2.8.0 The `$name` parameter was added.
         * @since 5.5.0 The `$args` parameter was added.
         *
         * @param string|null $name Name of the specific footer file to use. Null for the default footer.
         * @param array       $args Additional arguments passed to the footer template.
         */
        do_action( 'get_footer', $name, $args );

        $templates = array();
        $name      = (string) $name;
        if ( '' !== $name ) {
                $templates[] = "footer-{$name}.php";
```
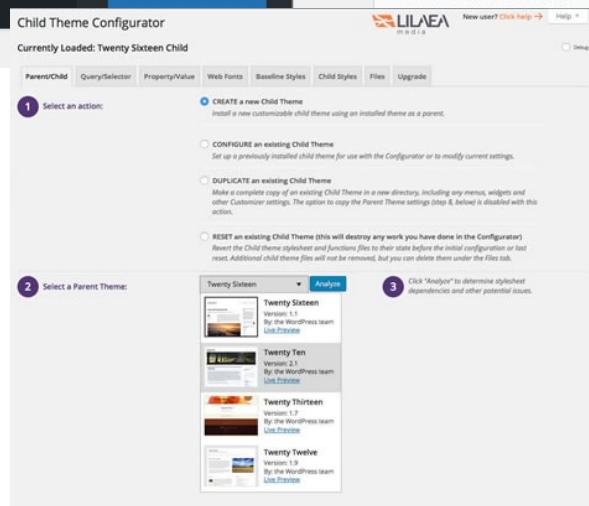

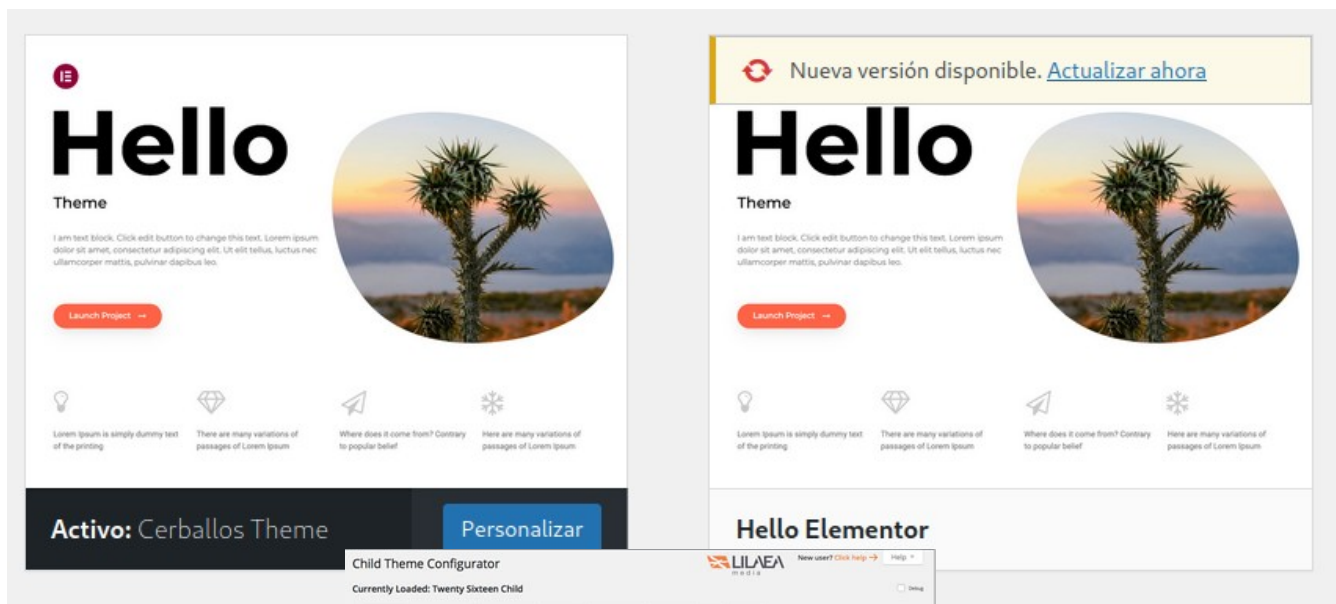

```php
        }

        $templates[] = 'footer.php';

        if ( ! locate_template( $templates, true, true, $args ) ) {
                return false;
        }
}
```
